Adoption Readiness Tool (ART)

Cost-efficient and sustainable software adoption with HP ART

HP's Adoption Readiness Tool (ART) is your single source development platform for the cost-effective creation of comprehensive IT education, documentation and performance support content. ART provides pre-built simulation-based courses in HP Software that can be easily customized by you and accessed by your users anytime, anywhere. With ART, your users achieve competence in HP Software much faster.

ART achieves new levels of simplicity and affordability in the drive to produce, distribute and update productivity-enhancing education in support of software rollouts. ART delivers on day one with HP's ready to use expert built content, providing high-quality, self-paced learning for HP Software process flows and key tasks. But ART goes way beyond the normal out of the box education experience. It includes a very powerful authoring tool that allows you to easily customize and create your own content across your entire IT environment. ART can be used by expert and non-expert alike to simply record on-screen activity and publish it into dozens of outputs that help reduce time at every step of the project. What's more, with ART you can create or translate content in 30 languages to eliminate geographical barriers. And as business processes change, ART allows you to update all your content simultaneously.

Key features

Create

Start with our expertise then customize and augment this content to match your software's unique configuration. ART simulations can be edited simply and supported with commentary, process flow diagrams and assessments.

Publish

ART provides a single source from which you can immediately publish a wide range of materials via pre-configured templates. These include business process documents, test scripts, hands-on practice simulations, job aids, classroom training guides, how-to demos and many more.

Engage

Offer easy access to simulation-based courses or instant refreshers and job aids through ART's learning and support portal. Mobile learning allows users to practice when and how they want to.

Extend

ART can be used to create materials for any windows or web-based application so productivity improvements can extend across your IT enterprise.

Benefits

Get ahead

Pre-built HP content puts your team months ahead for new deployments by providing hands on simulations even before you've installed your new system. As your project progresses, you can easily customize the delivered content and quickly create your own.

Optimize software investment

By increasing the competency of teams fast you will reduce errors and drive productivity.

Slash TCO

Cut development costs by quickly creating user simulations and content. Rapid production of dozens of outputs from one input reduces costs even further.

Cut support costs

Your users can resolve issues themselves using ART's job aid simulations and your help desk can create interactive how-to demos on the fly.

Lower risk

Deliver consistent best practice content across departments, languages and regions to enforce compliance.

Visibility for management

Provide visibility into user proficiency, organizational readiness and opportunities for further learning.

Why ART?

Competent users are critical to optimize your investment in software. ART makes it more affordable and easier to help your people achieve competency through the production of engaging simulations, documentation and learning materials. Staff can access simulation-based content and support tools immediately, anytime, anywhere. It provides instant refreshers that get them back to productivity in minutes. And all content outputs can be updated from the single ART source, making it simple to keep users' skills in-step with the software lifecycle.

Competent staff need less support. They get the most from software four times faster than teams without effective training. And they ensure software delivers its intended value. With your software only as powerful as those running it, contact us to see how ART transforms software proficiency to optimize your team's productivity.
